JAVA - ISWHITESPACE() METHOD

Description:

The method determines whether the specified char value is a white space, which includes space, tab or new line.

Syntax:

```
boolean isWhitespace(char ch)
```

Parameters:

Here is the detail of parameters:

- **ch** -- Primitive character type

Return Value:

- This method Returns true if passed character is really a white space.

Example:

```
public class Test{

   public static void main(String args[]){
      System.out.println(Character.isWhitespace('c'));
      System.out.println(Character.isWhitespace(' '));
      System.out.println(Character.isWhitespace('\n'));
      System.out.println(Character.isWhitespace('\t'));
   }
}
```

This produces the following result:

```
false
true
true
true
```
