The following simple example program demonstrates the assignment operators. Copy and paste the following Java program in Test.java file and compile and run this program:

```
public class Test {

    public static void main(String args[]) {
        int a = 10;
        int b = 20;
        int c = 0;

        c = a + b;
        System.out.println("c = a + b = " + c );

        c += a ;
        System.out.println("c += a = " + c );

        c -= a ;
        System.out.println("c -= a = " + c );

        c *= a ;
        System.out.println("c *= a = " + c );

        a = 10;
        c = 15;
        c /= a ;
        System.out.println("c /= a = " + c );

        a = 10;
        c = 15;
        c %= a ;
        System.out.println("c %= a = " + c );

        c <<= 2 ;
        System.out.println("c <<= 2 = " + c );

        c >>= 2 ;
        System.out.println("c >>= 2 = " + c );

        c >>= a ;
        System.out.println("c >>= a = " + c );

        c &= a ;
        System.out.println("c &= 2 = " + c );

        c ^= a ;
        System.out.println("c ^= a = " + c );

        c |= a ;
        System.out.println("c |= a = " + c );
    }
}
```

This would produce the following result:

```
c = a + b = 30
c += a = 40
c -= a = 30
c *= a = 300
c /= a = 1
c %= a = 5
c <<= 2 = 20
c >>= 2 = 5
c >>= a = 1
c &= a = 0
c ^= a = 10
c |= a = 10
```
