The following simple example program demonstrates the relational operators. Copy and paste the following Java program in Test.java file and compile and run this program. :

```
public class Test {  
  
    public static void main(String args[]) {  
        int a = 10;  
        int b = 20;  
        System.out.println("a == b = " + (a == b) );  
        System.out.println("a != b = " + (a != b) );  
        System.out.println("a > b = " + (a > b) );  
        System.out.println("a < b = " + (a < b) );  
        System.out.println("b >= a = " + (b >= a) );  
        System.out.println("b <= a = " + (b <= a) );  
    }  
}
```

This would produce the following result:

```
a == b = false  
a != b = true  
a > b = false  
a < b = true  
b >= a = true  
b <= a = false
```
