

# JAVA - STRING HASHCODE() METHOD

[http://www.tutorialspoint.com/java/java\\_string\\_hashcode.htm](http://www.tutorialspoint.com/java/java_string_hashcode.htm)

Copyright © tutorialspoint.com

## Description:

This method returns a hash code for this string. The hash code for a String object is computed as:

```
s[0]*31^(n-1) + s[1]*31^(n-2) + ... + s[n-1]
```

Using int arithmetic, where  $s[i]$  is the  $i$ th character of the string,  $n$  is the length of the string, and  $\wedge$  indicates exponentiation. (The hash value of the empty string is zero.)

## Syntax:

Here is the syntax of this method:

```
public int hashCode()
```

## Parameters:

Here is the detail of parameters:

- NA

## Return Value:

- This method returns a hash code value for this object.

## Example:

```
import java.io.*;

public class Test{
    public static void main(String args[]){
        String Str = new String("Welcome to Tutorialspoint.com");
        System.out.println("Hashcode for Str :" + Str.hashCode());
    }
}
```

This produces the following result:

```
Hashcode for Str :1186874997
```
