

JAVA - STRING SUBSEQUENCE() METHOD

http://www.tutorialspoint.com/java/java_string_subsequence.htm

Copyright © tutorialspoint.com

Description:

This method returns a new character sequence that is a subsequence of this sequence.

Syntax:

Here is the syntax of this method:

```
public CharSequence subSequence(int beginIndex, int endIndex)
```

Parameters:

Here is the detail of parameters:

- **beginIndex** -- the begin index, inclusive.
- **endIndex** -- the end index, exclusive.

Return Value:

- This method returns the specified subsequence.

Example:

```
import java.io.*;

public class Test{
    public static void main(String args[]){
        String Str = new String("Welcome to Tutorialspoint.com");

        System.out.print("Return Value :" );
        System.out.println(Str.subSequence(0, 10) );

        System.out.print("Return Value :" );
        System.out.println(Str.subSequence(10, 15) );
    }
}
```

This produces the following result:

```
Return Value :Welcome to
Return Value : Tuto
```
