Copyright © tutorialspoint.com

Description:

The method round returns the closest long or int, as given by the methods return type.

Syntax:

This method has following variants:

```
long round(double d)  
int round(float f)
```

Parameters:

Here is the detail of parameters:

- **d** -- A double or float primitive data type
- **f** -- A float primitive data type

Return Value:

- This method Returns the closest long or int, as indicated by the method's return type, to the argument.

Example:

```
public class Test{  
  
    public static void main(String args[]) {  
        double d = 100.675;  
        double e = 100.500;  
        float f = 100;  
        float g = 90f;  
  
        System.out.println(Math.round(d));  
        System.out.println(Math.round(e));  
        System.out.println(Math.round(f));  
        System.out.println(Math.round(g));  
    }  
}
```

This produces the following result:

```
101  
101  
100  
90
```
